Art Unit: 1623

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-55, drawn to a solid pharmaceutical composition for parenteral injection comprising a carbohydrate binder, and to methods of making such compositions, classified in class 536, subclass 1.11+.
- II. Claims 56-58, drawn to a device containing a solid pharmaceutical composition for parenteral injection comprising a carbohydrate binder, classified in class 604, subclass 68.

The inventions are distinct, each from the other because of the following reasons. Inventions I and II are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as an insertable or implantable drug delivery device, and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions

Art Unit: 1623

anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classifications and/or divergent subject material, restriction for examination purposes as indicated is proper. Furthermore, searches for the two groups would not be coextensive, and would therefore place an undue burden on the Examiner. A reference for one group could not necessarily be expected also to be a reference for the other group. This is especially considered so because a search would necessarily include the open scientific literature, and could not be restricted to patent files.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition
